How to add a Docuseek2 video to Canvas

Docuseek2 is a streaming video service that the University of Oregon Libraries has licensed. Docuseek2 has over 800 films and documentaries from film makers including Bullfrog Films, Collective Eye Films, Icarus Films and others. This is a great way to “flip” your classroom; students watch pertinent videos at their convenience, saving scarce, valuable classroom time for lecture and discussion.

Films, documentaries and more information on the Docuseek2 Streaming Service can be found here: http://library.uoregon.edu/node/5181

To provide a link to a video in Canvas:

1. Select your film or documentary from Docuseek2.
2. Above the video, click the **Link to/Embed** button. A pop-up window will appear with the 35-character string used in the link in Canvas. It is highlighted in below.

3. Log into Canvas, go to your **course** and the **assignment, discussion, quiz, or page** that you would like to add the video to. You can link a Docuseek2 video into any Canvas tool with the **Rich Content Editor**.
4. Select **Edit** to access the **Rich Content Editor**.
5. Enter a **Title** for the item.
6. Click in the **Rich Content Editor** box.
7. While holding down the control key (command key ⌘ for Mac users), press the K key. An insert link window will open, as shown below.

8. In the URL box, paste the link below. Then, replace the 35-character string in this link with the 35-character string in Docuseek2 embed link of the video you want to link to here. 

   https://docuseek2.com.libproxy.uoregon.edu/view/check/14912433110000000485100000088/0/16

   To enable viewing on and off campus the URL must include our libproxy so please copy this link.

9. Add the Text to display, usually the title of the Video.

10. To have the video open in a new window, (which is a best practice with videos) select New window in the Target field. Then click Ok.

   ![Insert link window](Image)

11. Click the blue Save button and you will have a page with your video title as a link to the new window in which your video will open and play. This enables both on and off-campus viewing. If the libproxy link provided on the Docuseek2 Video site is not used, off-campus users will not be able to view the video. You can now finish editing your assignment, discussion, quiz, or page and add any further instructions directly into the Rich Content Editor without affecting the video. For example:
